

D/B table for grocery list:

Create a separate page that displays the user's "grocery list", a list of ingredients that the user has run out that they need to replenish

Implement Basic Meal Planning:

Create a separate page that allows users to "meal plan", which should essentially allow a user to assign a recipe to breakfast, lunch, and dinner to each day of the week.

Allow User to Adjust Quantity of Existing Ingredients:

In the ingredients menu the user should be allowed to adjust the quantity of the listed ingredients that already exist in the list.

Create Indicator that Meals Planned require missing Ingredients:

On the meal planning page, the meals that require ingredients that the user doesn't have/doesn't have enough of have an indicator that shows that those meals can't be made.

Grocery List Automatically Updates:

If an ingredient's quantity is set to 0, that ingredient should be automatically placed on the grocery list.

Update "Ingredients Page" UI according to specifications:

The ingredients page's UI should be updated to look like the UI that was designed in sprint 2.

Update "Recipes Page" UI according to specifications:

The recipe page's UI should be updated to look like the UI that was designed in sprint 2.
